Introduction

[.https://anaplanoauth2service.docs.apiary.io](https://anaplanoauth2service.docs.apiary.io).
Anaplan's OAuth supports OAuth version 2.0. We support these two flows:

[.https://anaplanoauth2service.docs.apiary.io/traffic](https://anaplanoauth2service.docs.apiary.io/traffic).

- [Authorization code grant](https://datatracker.ietf.org/doc/html/rfc6749#section-4.1) (https://datatracker.ietf.org/doc/html/rfc6749#section-4.1).
- [Device authorization code grant](https://datatracker.ietf.org/doc/html/rfc8628) (https://datatracker.ietf.org/doc/html/rfc8628) (known as a device grant in Anaplan)

Getting started

The flows below enable you to build your own Anaplan API integrations.

API use requirements

As a best practice for using our APIs, you should be familiar with RESTful APIs and any specific requirements for the action you're performing.

- For more information, see [Anaplan API Requirements](https://help.anaplan.com/anapedia/Content/Data_Integrations/Anaplan_API_Guide.html#APIrequirements) (https://help.anaplan.com/anapedia/Content/Data_Integrations/Anaplan_API_Guide.html#APIrequirements).
- OAuth for a device grant does not currently support single sign-on (SSO)
- If you use an authorization code grant, this supports SSO on self-service SAML
- You can integrate [SCIM](https://scimapi.docs.apiary.io/) (https://scimapi.docs.apiary.io/) with OAuth to sign in to a specific workspace or tenant

Supported authentication methods

This table shows which authorization grant each authentication method supports:

Authentication method	Authorization code grant	Device authorization code grant
Single sign-on (SSO) SS SAML	Yes	-
Basic auth	Yes	Yes
